

One of my cats had a sore eye and is losing appetite. It was quite late and most of the veterinary clinics are closed.

I smeared some Argasol Silver gel over his infected eye, and syringed him 2ml of the Argasol 32ppm supplement before we call it a day. The next day, to our pleasant surprise, my cat's eye was less swollen and he even regained his appetite.

We continued with the Argasol treatment for about 5 more days and he recovered fully. I have since used Argasol Silver for all my cats and try to keep away from all that expensive vet visits!
