

I had a case of staph infection first on my neck and chest area, then on my leg.

It took me weeks to get rid of. I kept applying Argasol Gel many times a day and it cleared faster than using the other stuff I tried to make it go away. Once I applied frequently the lesions healed in a matter of days.

I also applied the gel on a very painful ulcer under my tongue during this episode. It took 2 days to clear unlike bonjela which didn't help this time.

To stop the infection from spreading, I used the gel as a hand sanitizer throughout the day.

I'm very glad I didn't have to take antibiotics or pay extra for a prescription to treat it--thanks to Argasol Silver!

I also use the gel for mosquito bites because it doesn't burn when applied on open wounds.
